

- **New FtpMagic Version Available** -
"File Backup"

A software and documentation update, version 21.01.00 is available for FtpMagic. It is available at "www.DigiTelSoftware.com" as a Full Installation (if it's not already installed) and as an Upgrade Installation (if it's already installed). A new Manual is also available.

The updates in this version include:

1. A new File Backup feature has been added to automatically back-up each file as it is uploaded to an ftp site. Each of the available 25 FTP settings can be set to an individual backup path. Each backup path can be set as desired, or can use its default path.

The backed-up files can be manually managed, or automatically set to delete once they are old enough. The number of days you wish to save the files can be set for each backup path. So as backed-up files become older than the number of days you wish to save them, FtpMagic will automatically delete them for you.

This new File Backup feature also enables you to send the file backups to an FTP folder in place of, or in addition to, saving the backup files on the local hard drive. To send a file backup to an FTP site, just enable file backup and set the backup path to an unused FtpMagic Intake Path. Then just set that FTP setting's destination to another FTP site or FTP folder.

If you have any questions about how to do this, or want to rent an FTP site, please email Info@DigiTelSoftware.com.

Additional details are available in the "Read Me" link at "www.DigiTelSoftware.com/Software.htm".
