

Customer Update Notice

Volume C3 Issue 5 June 7, 2010

New Version of - DigiTel - Now with improved *Talk-Off Rejection* !

A new DigiTel Software Version is available!

DigiTel now has improved Talk-Off Rejection and new Mode Prompts.

DigiTel Version 20.07.04 is compatible with all versions of Windows.

Its major new feature is the improved Talk-Off Rejection!

You can now set the Touch-Tone Sensitivity setting (in the General tab of the Toolbox) down to 3 so that all users can tap Touch-Tones quicker and use old (short Touch-Tone burst) phones to Log-in, enter Worktypes and Reference Numbers, and for any other function outside of Record mode.

And now for those rare users who's voice can sometimes sound like a Touch-Tone (in that user's Custom Settings tab of the Toolbox) you can set the new Talk-Off Rejection setting up to a 5 or 6 to reject most Touch-Tone sounds in their voice when they are in Record mode.

Many additional improvements are incorporated into this new version too, including the exchange of the Stop, Rewind, and Fast Forward beep tones for prompts that better inform the user about which mode they're in. Also, the New Dictation Alert tone now includes a voice announcing "New Dictation is Ready", and a new "New Priority Dictation is Ready" prompt announces the arrival of new priority dictation.

A new "Paste to all users" feature lets you paste data copied from one user profile into every user profile. You can also choose to paste all data, or just certain data.

A new setting (in the Line's tab of the Toolbox) switches the user from Record to Stop mode upon hearing silence for a period of time. In the rare case where a phone line doesn't provide Disconnect Supervision (but instead only provides silence when the calling party has hung-up) this new setting can be used to more quickly free-up a line instead of waiting for the user's Max Rec timeout to elapse.

And the system's user capacity has been extended from 1000 to 2000 users.

If you would like help upgrading your software, just let us know !

 **Windows**
Compatible with all versions, 32-Bit and 64-Bit /
Windows 7, Vista, XP, 2000, Server 2003 and 2008

DigiTel... *the best call-in dictation system on the planet !*
