Volume C3 Issue 6 June 17, 2010

## ***New Version of*** **- DigiTel, ReportGenie, DigiScribe -** ***Now with Extended File Numbers !***

### **New DigiTel, ReportGenie & DigiScribe Versions are available!**

**The File Number has been extended from up to 9999 to up to 99999999.**

First let me mention that the on-demand spoken File Number feature was inadvertently disabled in the recent release of DigiTel version 20.07.04. This new version of DigiTel version 20.07.04a restores that feature.

In this new version of DigiTel the File Number's upper limit of 9999 (before it rolls over back to 1) has been extended to 99999999. This allows each dictation to be assigned a unique file number without re-using file numbers. An upper limit of 99,999,999 (before it rolls over back to 1) means that it would take 2,739 dictations each day, every day, for 100 years to reach that limit. So for all practical purposes, the new upper limit of the File Number count can never be reached, thus insuring each dictation will always have a unique File Number.

Also the leading zeroes in front of the File Number have been removed in this new version. This saves Reviewers time when they are selecting work to review by File Number.

**If you upgrade to DigiTel version 20.07.04a, please also upgrade your ReportGenie (to 23.00.01a) and DigiScribe (to 22.03.02a) as they have each been adjusted to accept the new File Number changes.**

Also in this new version of DigiTel, the prompt timing has been adjusted to fix the problem of the automatic spoken File Number not always playing completely.

If your users prefer the original Stop Tone instead of the new Stop Prompt, you can easily switch between them on the Prompts page at [www.DigiTelSoftware.com](http://www.DigiTelSoftware.com).
